

# Hydrophilic Waterstop Range a Perfect Fit

Adcrete Industries Pty Ltd further cements its position as the leading supplier of innovative concrete maintenance and waterproofing products.

Since 1986 Adcrete Industries has specialised in the development and production of high quality protective and decorative concrete solutions. This Queensland based manufacturer has now introduced a full list of high performance Waterstop Products to compliment its well established division of waterproofing systems.

The hydrophilic swelling action of these components when contacted by water is designed to create a positive seal against the face of the concrete joint and prevent water entry into the area through the protected joint. Distributed under the Rim Seal name, the Adcrete Waterstop products are designed for use on foundation wall slabs, slabs-on-grade, precast wall panels, manholes, pipe connections, box culverts, utility and wet wells, and potable water tanks. The range consists of –

- A series of tapes suitable for fresh and saline water environments with an expansion ratio of up to 300%.
- One component hydrophilic adhesive (cartridge) for waterstop applications in difficult access areas.
- Liquid Hydrophilic Polyurethane with a swelling ratio greater than 400% for use as a waterstop on sheet pile locks.
- Extended PVC Waterstop components with hydrophilic rubber elements for installation prior to pouring of the concrete.

Adcrete's expansion to incorporate the Rim Seal Waterstop range represents the company's continuing commitment to supplying the

construction industry with reliable protective and decorative systems including –

- Waterproofing membranes for all environments
- Weatherproofing of natural stone / masonry
- Concrete coatings, paving, tiling and floor finishes
- Comprehensive range of sports surfaces
- Road surface systems – eg. bike ways, bus lanes, traffic calming
- Enviroshield 'paint on' Thermal Barrier for buildings and vehicles (Refrigerated trucks, caravans)
- Polyurea, Polyurethane, Polyaspartic and Aliphatic coatings

Adcrete specialises in the development of water based, low VOC, environmentally friendly applications throughout all of its product divisions.
